

## **Exercise 7.6**

(Objectives 7.10,7.11)

Create a function to remove the first and last element of the passed list. The function header should be defined as below

```
def chop(lst)
```

You can use following code to test if chop is created correctly.

```
t=[1,2,3,4]
```

```
chop(t)
```

```
print(t)
```
