Exercise 1.4

(Objective 1.5,1.6)

1. Create a python program test.py, put following five lines into your test.py (or you can copy them from test.txt). Run your program and answer following questions.

1) How many errors you can find out?
2) What are them? And what is the type of each error?
3) How to correct those errors?

```
print("Programming is fun")
prin("Python")
     print("Computer Science")
print(1/0)
print(1.0/0)
```
